Statement Supplied by Candidate

David Cunningham
Applied Dynamics
Greenfield, Massachusetts

I'm running for the Region 1 Director position to further contribute with moving EASA and its membership into a new era.

I have been involved on the local chapter level as a participant since 1996. Upon moving to Massachusetts in 2004, I found our local chapter to not be very active. When I was approached to be involved with consolidating chapters within our region, I was excited to participate. I was elected to the newly formed Northeastern Chapter Board as its secretary. I'm proud as to what this board has been able to accomplish since the consolidation of chapters.

I find EASA to be a very important organization to our industry. As the workforce climate has changed in recent years, I believe that electromechanical repair centers will rely on EASA even more in the future to assist with technical support and training programs for its members.

I'm passionate about EASA's mission and would like to serve in a greater capacity to help shape our organization. I hope you will consider giving me this opportunity.
